To Whom It May Concern,

I have had the great pleasure of working with Hire CIO on a variety of initiatives over the past 2 years. Last year, I engaged Hire CIO to assist in providing EHR Assessment support services on behalf of Access HealthColumbus. Mary Dielman and her team were knowledgeable and professional and created strong relationships with their assigned practices. The Hire CIO team worked with two of our physicians' offices to review and understand their workflows. They prepared a complete report documenting each offices current state and what the recommended future state could be in the event EHR was implemented.

In addition to identifying business processes the EHR would eliminate, the report included many items the office could implement immediately to improve current processes. The report also highlighted several of the tasks which needed to be streamlined, prior to implementing the EHR avoiding costly issues in the implementation phase. To assist in the system selection process, this work included a high level list of requirements as well.

Hire CIO did a complete and thorough job throughout this initiative. As a result of their past performance we have asked Hire CIO to support our efforts in support of the Northwest Ohio regional Extension Center. Hire CIO is now one of our primary consultants who will be assisting us in that region.

Sincerely

William P. Mitchin
